

## Attaching a post pierced earring to a clip

Post to pierced clip-back can be used to convert "post-pierced" earrings only. Post to pierced clip backs are not suitable for heavy chandeliers or wired dangling earrings that dangle off French clips or Lever backs. For these earrings use [regular clip-backs](#)

### Choose the correct earrings to convert

Note due to the construction of the clips, small stud types of earrings may look "chunky" after the conversion, clips are better suited to med-sized post pierced earrings

Choose the correct metal-toned of post-to-clip backs to complement the color of the earrings you are going to convert.

### To start the conversion

#### Step 1:

Open your post to pierced clip back to make it easy to work with.

#### Step 2:

Position the post of your earring toward the top of your clip-back where you will find a slight light opening

#### Step 3

Push the entire earring post all the way towards the clip-back. Once you have pushed all the way to the end, the top of the clip should be pressing against the back of your earring

#### Step 4.

Once the entire post is pushed all the way to the clip-back, proceed to bend the post vertically using "gentle pressure". Once the post is bent, **do not straighten back**, as the post will weaken and possibly

#### Step 5:

Once the post is bent, you will be able to wear the earrings as clips. :)

Post to Clips are reusable. Just gently slide the post of the earring out of the clip and your clip is ready to be used with another pair of earrings. **We do not recommend straighten the post of your earrings as there is a high risk of breaking it.**
